Directions [93–100]: Read the following passage carefully and answer the questions that follow.

For years, I have had a screensaver on my iPhone that says "read a book instead". It hasn't worked. I used my phone for an average of 4 hours and 2 minutes a day last week, picking it up 103 times a day. That's about once every 10 minutes while I am awake. And for what? Pokémon Go (yes, I am addicted), social networking and reading – in that order. And when I'm not on my phone, I am on my laptop. If this sounds familiar, and somewhat **nauseating**, meet the Light Phone. Launched this month after a wildly successful crowdfunding campaign, Light Phone is a credit card – sized phone that only lets you make calls and text. That's it. The first version of Light Phone was calls only and proved too much for even the most hardened minimalist. The second version, to be released soon, will allow users to use maps or summon an Uber or Lyft but its creators, Joe Hollier and Kai Tang, say they will never add email or any social media.

"Remember the old days when you sat down at your computer and you were connected, and then you stood up and you were disconnected. There was a clear separation," says Hollier. "Now you're connected 24/7. This isn't what I wanted." The point of the Light Phone is to let you leave your smartphone at home (or as Tang does, in his bag) and live more of your life in the – shudder – real world. My plan was to use it for a week, leave my iPhone at home or on my desk, only using it when I could as easily have used my laptop. It proved surprisingly hard – but not for the reasons I expected. Initially, panic came in waves. What if I missed that big email or an urgent message from family and friends? I had told the office and my **significant others** I was on phone or text only, but that didn't stop me worrying.

The extent of my dependency was **manifest** all week, and it's little wonder – all this screen time is rewiring our brains. We now lose concentration quicker than a goldfish (eight seconds for us, nine for the goldfish, according to one study). To my horror, I find myself reaching for the Light Phone, even though I know it does nothing, like an ex – smoker patting his pockets for his lighter. As a post – work drink with colleagues turns from gossip to football, I automatically reach for it to distract myself from sport banter before realising I have to suffer in silence. Every quiet moment, I wanted to check my phone. Often, cravings are about my "need" for information. Out for pizza with my boyfriend, we start discussing the 2020 elections and Florida. How many Puerto Ricans moved there after Hurricane Maria? Will they tip the balance? I

want to check my phone. The conversation shifts to Brexit. Ditto. I want my phone. And when he goes to the bathroom, leaving me alone at the table, you guessed it – I want my phone.
